PC INSIDE — Integrated PC

Technology Serving Design

The company

Arthur Holm has its origins in the Danish furniture designer *Jorgen Alex Jensen* who was active during the sixties and the seventies. His design inspiration and his concept of ergonomics have been continued by his family, the design force behind the Arthur Holm product range. The result of combining Scandinavian design tradition with Mediterranean creativity, flexibility and emotion is a wide product range built on more than 20 years of craftsmanship.

Arthur Holm offers a professional product range where tomorrow's technology is shaped into valued materials with design flexibility and customisation, specially created to enhance communication and collaboration in reception, conference and meeting areas.

The art of customisation

Arthur Holm offers a range of ingenious products whose designs are based on quality materials and the latest technology.
Products which endow meeting and conference rooms with silent, ergonomic, innovative and aesthetic solutions that integrate into the furniture, hang from the walls as works of art or are used as interactive points of information.

The world of Arthur Holm

Arthur Holm offers a selection of unique, elegant, versatile, flexible and ergonomic products that are being used in meeting and conference rooms, reception areas, auditoriums and public zones of leading companies throughout the world. More than 12.000 installations speak for themselves.
It will be our pleasure to work with you, designing your unique environment; our broadcast electronic engineers will provide the latest technology while our design team will offer you the most exclusive appearance.

Our team puts its heart, passion and pride in all our designs.

"Five reasons to work with Arthur Holm: Design, technology, quality, flexibility and support"

Dynamic3 is extremely easy to install and control, requiring the minimum desk depth. On the other page, the wide range of movements and positions of Dynamic3.

Built entirely of aluminium and black edged anti-glare glass, the Dynamic3 monitors offer a discreet and timeless design. The anodised finish provides a soft, silky effect, is extremely resilient and also serves to dissipate heat. The glass protects the screen, reduces "mirror" effect, allows for natural transparent colour and can work as a touch surface. The Dynamic3 range provides excellent contrast and unsurpassed viewing angles.

Integration into furniture is extremely easy. The back of the monitor can be covered with leather, Corian or wood, to allow for a uniform table finish when the screen is folded. The system is unique not only in terms of its aesthetics but also in terms of its functionality; the screen rises and leans, has an additional 180 degree rotation movement, and retracts inside the work surface in two different positions, with the monitor oriented up or down.

The touchscreen can be used in a completely flat position, flush with the work surface. These monitors are available in 15", 17" & 19" & 22", in semi-automatic & motorised versions. Its sophisticated electronics automatically detects the screen position, orienting the image accordingly. If the sensors detect resistance, the movement is stopped to protect the user. The screen's lifting system automatically activates the elevation of the keyboard and mouse tray.

Safety system

Energy saving design

Serial control & Remote diagnose

Dynamic3Talk is a multi-position motorised monitor including an independent lift of "gooseneck" type microphones to be easily integrated into board, meeting and conference tables as well as into information counters; a smart combination of design, technology and ergonomics. It is a unique system for furniture integration, totally built in aluminium and glass. The screen opens and closes with a motorised movement similar to a laptop, with the peculiarity that it can turn 180 degrees. It can be folded into the desk, both with the screen

facing up or facing down. In the last case, the back of the monitor housing can be covered with leather, wood, or any type of material to obtain a uniform finish of the table surface.
The Dynamic3 product range provides keyboard, mouse and multi-touch screen as options. When the screen is moving up, a tray is automatically raised and the microphone has an independent mechanism. Thus, the user can choose not only the position of the monitor but also the accessibility to the microphone.

Serial control & Remote diagnose

Safety system

Dynamic3Reverse is a unique electrically foldable 18,5" touch screen monitor with horizontal and vertical working positions. Its tilt angle can be adjusted at any point, from flush on desk up to 90 degrees and it rotates, to be folded down. The back of the screen can be veneered to perfectly match with the desk finish.
The monitor has an Interactive Setup Display which provides exclusive features for remote control and remote adjustment; it has DVI-I and DVI-D HDCP compliant inputs and it is extremely compact. It is ideal too be used for interactive meeting, conference and board room applications

and it has the advantage to close with the screen facing down. The screen is then protected and the table can be used for other applications.
Its totally adjustable tilt angle allows having a perfect vision to the rest of the meeting attendants or to the audience. It is also an ideal solution for auditorium or lecterns. The desired tilt position can be memorized and then recalled. The monitor is built in a solid aluminium block with a black edged glass. It is robust, compact and very elegant. It is exceptionally silent and very easy to install.

DynamicX2

5 years limited warranty
Automatic 20° tilt
Optionally adjustable tilting angle
from 0° to 20°
Interactive setup display
Maintenance free
HDCP compliant
Energy saving design
Safety system
Serial control & Remote
diagnose

DynamicX2 is extremely easy to install and control and can be completely customised. Above is an example of a DynamicX2 with integrated webcam.
DynamicX2 can be customised for a complete working solution.

DynamicX2 are elegant monitors built from a solid aluminium block. They have a vertical motorised movement with an automatic 20° tilt to ensure the best ergonomics, visibility and viewing angle. This automatic tilting system provides a fast, silent and robust response, a highly reliable, maintenance-free solution.
DynamicX2 have slightly curved edges for a sober modern look and they are available with a matt screen finish, with a black edged anti-reflection glass or with a golden flash.

The range is available from 15" to 22" and it can be customised with single or double retractable microphones, speakers, voting systems, USB connectors and camera.
The black edged glass can be optionally turned into a multi-touch screen and the anodized aluminium housing can be customised in different colours. The safety system stops the movement if any resistance is detected. They are remotely controllable and diagnosable through the ERT interfaces in an easy and cost effective way.

Left to right, DynamicX2 Gold, plated with 24 carat gold for a unique luxurious look; DynamicX2 with black finish, DynamicX2 with a matte cover plate and DynamicX2 with a bronze finish.

Optionally adjustable tilting angle
from 0° to 20°
Interactive setup display
Maintenance free
HDCP compliant
Energy saving design
Safety system
Serial control & Remote diagnose

D ynamicX2Talk is state-of-the-art reliable, retractable, individually addressable and remotely diagnosable monitor which also integrate an independent lift system for "gooseneck" type microphones to be used at conference rooms, meeting rooms, board rooms, auditorium and public areas.
The monitor is silent, fast and extremely elegant with a modern and sober design, made of mechanised and anodised aluminium. The upper table cover plate integrates a mechanism to lift and retract "gooseneck" type microphones equipped with a LED ring which changes color green to red, to indicate the willingness of the user to talk. Furthermore, the system can also integrate

a full HD video camera, becoming a complete audio and video conference station, which can disappear within the desk, when no needed. DynamicX2Talk provides automatic tilting by using only one engine; a system which is protected by an international patent. Its passive cover plate prevents dirt and any kind of object from falling inside the mechanism and the lift system has different speed levels depending on the screen position, having as a result a harmonic drive and eluding abrupt movements. An independent lift for the microphone, with a stylish round hedge has been added to this solution and consequently, the user can choose to have only the screen, only the microphone, both or none.

DynamicTabLift

Motorised lift system for iPad®
Adaptable to other tablets
Revolving system for horizontal
and vertical positions
Serial control
Remote diagnose
Maintenance free

DynamicTabLift is a motorised lift system for Apple® iPad®. You can easily turn your iPad® into a screen that can be hidden when not in use to ensure a clear working environment. The motorised lift system comes with both vertical and horizontal adjusting in order to create the perfect viewing angle by tilting the monitor to a maximum of 20 degrees. An advanced fixing mechanism ensures a steady position of the iPad® even when the touch-screen is in use.

The upper cover plate is made of brushed stainless steel to ensure durability and nice design at the same time. Different colours and an embedded power supply are possible as well. This lift system can be controlled locally using the two buttons located on the cover plate, remotely through external GPI controls (contact closure) or AHnet Protocol (RS422).

Serial control & Remote diagnose

DynamicSignatureDisplay is a retractable digital labelling solution for auditorium, institutions and public communication spaces in general. The product consists in a vertically motorised retractable single or double side stretched screen and a Linux based software which allows an easy display of a picture and name or any digital content in full colour.
In the double screen version, the two screens are placed back to back in a compact, anodised aluminium frame, allowing the display of different information on each of them. Thus, the side facing the audience will show the picture

and name of the conference participant, while the other side can display necessary data for the viewer.
The screens are only visible when needed, and they keep a minimum height, disappearing within the table desk through the push of a button or remotely controlled through RS-485. They provide an extremely fast and silent retractable system, a safety system and require no maintenance. The solution comprises a Linux based software which allows an easy display of picture and text, ideal for name tagging applications over a single CAT-5 cable per screen.

Remote diagnose
Dynamic1Twin is a vertically retractable system with double screen. Two monitors are placed back to back in a compact anodised aluminium frame; allowing for the display of different content for a 2 way communication in reception desks, information counters or in meeting and conference room tables with limited space. The screens are only viewed when required, disappearing inside the table desk by the mere push of a button or by remote control.

Dynamic1Twin has an extremely fast lift system with a very low noise level. Very easy to install, these monitors require no maintenance. To protect the user, Dynamic1Twin are equipped with a safety system which stops the movements in case of resistance detection. They are remotely controllable and diagnosable through the ERT interfaces in an very easy and cost effective way.

DynamicVision

Motorised Wall mount for
video conference cameras
RS-422 and Infrared controllable
Customisable cover

**Designed for
wall integration.**

The DynamicVision cover
can be customised with any
fabric, wallpaper and lighter,
rigid materials or paint.

DynamicVision conceals
and reveals the video camera
at the users will.

Integrated motorised wall mount for video conference cameras and controls. Unveiling the camera upon request through RS-422, Infrared, contact closer Interface when needed, and storing it away when not in use, for a safe and controlled working environment and for protection of the camera. The front enclosure moves vertically up unveiling the camera, the tray then moves the camera forward simultaneously.

DynamicVision serves the system Integrator, the architect, the interior designer and the space planner with a superior solution to do their job.

INSTALLER
The pre-installation frame is the perfect solution to take away the coordination headache between the system integrator and the architects / constructers. It can be delivered separately to be installed into the wall at anytime, pointing out the placement of cables and power. Furthermore the DynamicVision helps the system integrator to easily bring and manage the cables and connectors simplifying the connectivity.

ARCHITECT/DESIGNER/SPACE PLANNER
Why should modern technology be in your way and not at your side? DynamicVision provides a straight forward solution to hide the video conference camera and control, enhancing the interior with its easily adaptable front enclosure which can be covered with fabric, wallpaper and lighter, rigid materials or paint.

This unique system not only makes the microphone disappear within the desk surface but also provides a pleasant interior light to indicate its status. Microphones are safely stored and protected, making meeting and conference spaces more versatile as the tables can be used for different purposes. The system includes a light ring that shines in the base when the microphone is in raised position. The cover plate is made of brushed stainless steel and can be veneered with different materials for a less intrusive table surface desk and to perfectly match the table finish.

DynamicTalk has 2 different working modes; PA and Conference. When in PA mode, a push button placed on the cover plate, allows to activate or de-activate the microphone. A LED light ring will indicate the status by changing colour, from green to red. The system will silence the microphone when this is in retracted position. When in Conference mode, the microphone will always be active and both the light ring and the access to the push button on the cover plate will be available through a connector (GPI/GPO). In this mode, the system is ready to be connected and controlled through a conference system.

DynamicTalk is available in 3 standard sizes, 400mm, 500mm, 600mm, for short, medium and large microphones with XLR connector. It is also available in customised versions for all types and sizes of conference microphones with optional integration of manufacturer's interfaces on the cover plate.

DynamicTalk can lift & retract different sizes and brands of "gooseneck" microphones.

Customisations of DynamicTalk

DynamicTalkH

Adapts to 40 cm. length microphones
Dynamic LED to indicate microphone's status
Maintenance free
Low space required underneath the table
Serial control & Remote diagnose

DynamicTalkH is a horizontal lift for gooseneck microphones. The system has been specially developed to optimize the space underneath the table where it will be installed; room for legs won't be a problem any longer. Silent, remotely controllable and yet elegant, reliable and easy to install, it's easy to install and can be veneered to match table's surface. The system allows the microphone to be bended and it automatically takes it back to its original horizontal position.

DynamicTalkH not only makes the microphone disappear within the desk surface but it also

provides a pleasant interior light to indicate its status (the light can change from red to green). Microphones are safely stored and protected and the meeting and conference rooms become versatile to be used for different purposes.

DynamicTalkH has 2 different working modes: PA and Conference; also DynamicTalkH can be remotely controlled and diagnosable though the AHnet open protocol (RS-422).

Desktop monitors are available in 15" and 17". Other sizes upon request.

Arthur Holm provides an easy and practical system to control and diagnose the monitors. The **ERT Interface** helps to lower the installation costs in terms of equipment and time. Based on a DIN rail system, they are extremely easy to install and to cable. The ERT Interface not only makes the installation faster but it also eliminates the need of external relay boxes and of extra power outlets. It provides astonishing features such as reporting the status of the monitors by e-mail.

The **AHnet Software** makes extremely easy the control of the monitors, facilitating their installation and administration. It gives feedback from each device, allowing on site or remotely located staff to get the status of up to 900 screens. This feature allows an optimal preparation of events in advance.

AHnet Software is operated through RS-422 or RS-485. The ERT Interface connects the monitors directly to a PC or via a local network, a tablet or iPad®, or by any standard control system. The open AHnet protocol is the most cost effective solution on the market for the installation and use of motorised Arthur Holm and Albiral monitors. No additional power sources or distribution boxes are needed.

The AHnet solution can send e-mail updates on the monitor status, by using standard e-mail accounts and can also provide Arthur Holm service staff to remotely access the installation. It can be simultaneously used in an installation with Dynamic1, Dynamic2 / X2, Dynamic3, DynamicTabLift, DynamicTalk and DynamicVision. The program automatically detects the model and activates the relevant menus with different windows for each model.
